

HYPODERMIC NEEDLE FACT SHEET

Terumo's SurGuard®3 safety hypodermic needle offers three modes of activation and a wide range of benefits. See how SG3 is combining safety, ease of use and simple standardization to make everyone comfortable.

EASE OF USE

- Versatile, intuitive safety mechanism that mimics 75-80% of safety hypo market¹

COMPLIANCE

- One single intuitive device could ensure compliance with internal standards¹

SAFETY

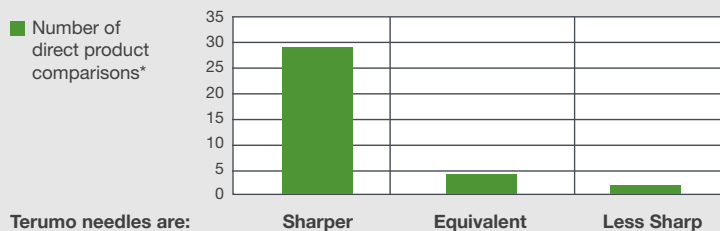

- New and improved hub and needle lock to help clinicians with naked sharps
- Safety mechanism minimizes ability to override¹

IMPROVED CLINICAL OUTCOMES

- T-Sharp™ Technology may reduce injection pain

62.2%
of needle stick
injuries are due
to discarded
unprotected
sharps.¹

TERUMO SHARPNESS SUPERIORITY VS COMPETITORS

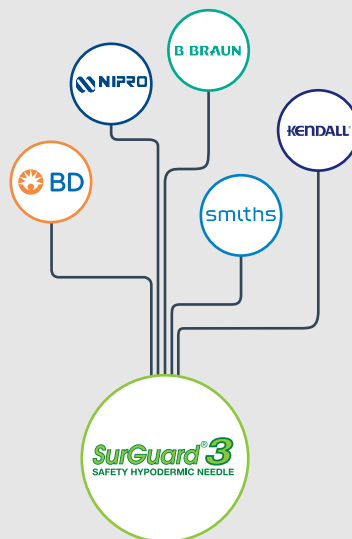

Terumo needles
proven sharper in
85%
of comparisons

*Hypodermic needles with and without vial penetration; allergy and insulin syringes with vial penetration.

STANDARDIZATION IS KEY

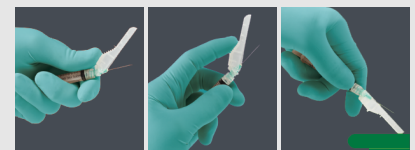

Products from different hypodermic manufacturers can be consolidated into one standard, easy-to-use product.

VERSATILITY

Most syringes can be activated two ways but **SurGuard®3** has

3

Thumb, finger or hard surface

**SurGuard®3's
double-bevel design**
allows the needle to penetrate skin
with less force, which could mean
greater comfort to patients.¹
