

Supply Assurance Program

Closer to Providers, Because Care Can't Wait

A first-of-its-kind initiative designed to reinforce supply chain resiliency and protect patient care from disruption.

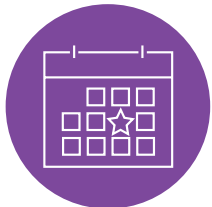

No additional cost • No contracts required

Supply Assurance

Why This Matters For You

45 Days Inventory on Hand (DIOH)

Nearly double the industry standard of 21-24 DIOH. Product positioned in **Supply Assurance Certified** distributor warehouses, closer to where care happens, to mitigate supply-demand imbalances utilizing the existing supply chain.

Robust Safety Stock

Additional 30-35 DIOH safety stock maintained across B. Braun's three US warehouses to reinforce supply chain resiliency.

Comprehensive Coverage

Full product portfolio including the complete line of non-DEHP products and Nurse Approved products (IV solutions, irrigation, nutrition, vascular access, pain control, IV sets and accessories and closed system transfer devices).

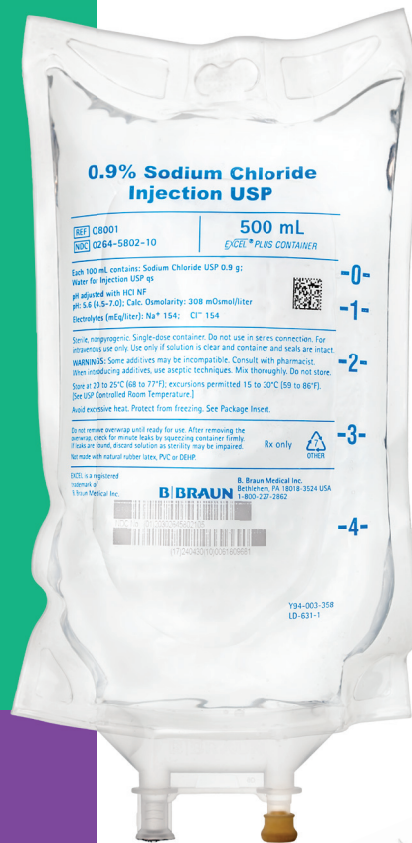

“To address supply and demand uncertainty, B. Braun is working closely with our key distributor partners to finalize agreements that position additional inventory in the forward supply chain. This proactive approach ensures healthcare providers have the products they need—precisely when they need them.”

Tim Cokkinias, Corporate Vice President, Distribution Sales and Operations.

The reason to eliminate DEHP from infusion therapy fluid pathways is clear

An entire fluid pathway not made with DEHP

- Only full line pharma portfolio supplier of 100% non-DEHP IV Drugs, Nutrition, Solution and Irrigation Containers as well as IV Catheters
- Plus a robust line of IV sets/connectors

Designed to weigh less and can be recycled.*

B. Braun bags are made with polypropylene instead of PVC for a clear weight difference compared to our competitors.

Today, 100% of B. Braun's IV bags and IV catheters are non-DEHP

- ✓ Patient safety
- ✓ Waste savings
- ✓ Supply assurance

Nurse Approved

B. Braun IV Solutions and Plastic Irrigation Containers not made with DEHP and PVC are the only IV offerings on the market to be certified Nurse Approved.

*With proper recovery infrastructure based on material composition; data based on consumer non-rigid bottle use.
